## TEACHING

### Courses at the University of Michigan

**Urban Sustainability** (Fall 2021, 20 students, Fall 2020, 20 students, Fall 2016, 16 students, Fall 2015, 17 students; Fall 2014, 21 students)

Department/Unit: SEAS/SNRE

This course introduces graduate students to the emerging field of urban sustainability from multiple disciplinary perspectives, primarily industrial ecology, urban political ecology, urban ecology, and planning. The course provides students with the theoretical and methodological tools with which to explore the potential for sustainable urbanism. Approaches to foster more sustainable and resilient forms of urbanization and urban life—ranging from localization to industrial symbiosis to ecological restoration—are introduced and evaluated. There is a focus on experiential learning, with site visits to Detroit, during which students are asked to view the city from varying disciplinary viewpoints, frameworks, and methodological approaches.

**Sustainability and Society** (Fa11 2021, 75, student, Fall 2020, 75 students, Fall 2019, 80 students, Fall 2018, 78 students, Fall 2016, 78 students; Fall 2015, 75 students; Fall 2014, 75 students; Winter 2014, 45 students; Winter 2013, 50 students; Winter 2012, 51 students)

Department/Unit: Program in the Environment (Undergraduate)

Course serves as required core for the UM Sustainability Minor. Students come from widely different majors. Course provides students with a broad, interdisciplinary understanding of sustainability in society—establishing a platform from which to further research, study, and practice it. Students connect sustainability to real-world challenges, evaluate its claims, develop knowledge to participate in sustainability debates, and identify novel pathways towards a more sustainable society.

**Environmental Assessment** (Winter 2013, 157 students; Winter 2012, 143 students; Winter 2011, 169 students)

Department/Unit: SNRE

This required course in the SNRE Master of Science program provided students with an opportunity to integrate knowledge and tools from the natural and social sciences and engineering in support of broader goals of sustainability in both management and policy arenas. In 2012, I completely redesigned

the course, dividing it into a series of interdependent modules, each led by SNRE faculty with expertise in a particular assessment family.

### **Courses at the University of Southern California**

#### **Sustainability Science and Society (2010)**

Sustainability theory, analytic tools, and solutions. Focus on urbanization, climate change, ecosystem appropriation, resource exploitation, and consumption. Role of sustainability science in public policy. Undergraduate general education course.

#### **Research Methods in Geography (2009)**

Co-taught methodological approaches found within the subfields of geography, with focus on: 1) sustainability and urban environments and 2) Geographic Information Science. Graduate seminar.

#### **Sustainable Cities (2008)**

Exploration of environmental problems linked to urbanization, drawing on historical analysis, social theory, scientific research, and city planning design/practice. Alternative policy options for urban sustainability. Graduate course.

#### **Food, Fashion and Furniture: Commodities in the Global Economy (2008)**

Study of how everyday things—the food we consume, the clothes we wear, the furniture we sit on—intertwine urban dwellers with distant people, places, and spaces. Provides theoretical and methodological approaches to understand how commodity chains and networks are perpetually reconfigured by processes of globalization and the role of urban consumer. Graduate seminar.
